

Public engineering & testing summary

Status: 9 September 2026 | Prepared: 18 September 2026

The company reports that all **seven core layers are built, working and connected to a live API**. SEICS leads the next stage of independent external evaluation.

REPORTED ENGINEERING POSITION

Layer	Internal testing reported	Next step
P1 MIR	Round-one tests passed	Rigorous internal testing
P2 RQSE	Round-one tests passed	Rigorous internal testing
P3 RYCN	Round-one tests passed	Rigorous continuity testing
P4 ACIS	Round-one tests passed	Rigorous cross-model testing
P5 MCL	Round-one tests passed	Rigorous calibration and benchmarking
P6 SEICS	20+ structured internal test cycles passed	Independent external validation
P7 SAVIOR	Round-one tests passed	Rigorous resilience testing

EXTERNAL VALIDATION IS NEXT

The company is seeking independent laboratory evaluation and reproducibility testing, alongside adversarial and security hardening and staged engineering review across the stack.

PLANNED EVALUATION AREAS

Assessment against defined criteria is planned for **evidence sufficiency, contradiction handling, abstention behaviour, audit trails and failure responses**.

How to read this summary

These are company-reported milestones, not an independent assessment. This public summary does not include raw logs, test-case counts, detailed criteria or model versions.
